Summary of Work Breakdown:

Item	Description
User Management Feature	Implement user authentication, registration, profile management, and password update functionalities.
Record Submission, Update, & Search Feature	Develop user-friendly forms for submitting and updating land transaction documents, including ownership and agent information. Implement security measures for user access and document upload. Add search functionality for locating existing records.
Dashboard Feature	Design dashboard for user account management, with options for record submission, updates, and document access. Implement user access controls and secure payment gateways for document access.
Document Management & Reporting	Develop features for certificate of submission, paid/downloaded documents, document uploading, and reporting using Crystal Reports. Implement security measures for document access and reporting.
Integrated Systems & Features	Integrate NIN verification, GIS mapping, survey verification, town planning data, and reporting functionalities. Include integration with payment gateways/enablers for secure payment processing. Implement security measures for data integration and payment processing.

Timeline and Cost Estimates:

Item	Timeline (Weeks)	Cost Estimate (NGN)
User Management Feature	2.5	400,000
Record Submission, Update, & Search Feature	4.5	720,000
Dashboard Feature	2	320,000
Document Management & Reporting	3.5	560,000
Integrated Systems & Features	1.5	240,000
Total	14	2,240,000

Assuming 160 hours per week (40 hours per resource), and cost per hour of 8,000 NGN.

Resource and Tools Used:

- Resources: 2 backend engineers, 1 frontend engineer, 1 Ui/UX designer.
- Tools: Java with Spring Boot for backend development, React JS for frontend, MongoDB and PostgreSQL for database management, Crystal Reports for document generation and reporting.
- Payment gateway: Paystack
