AFFLUENT
... ACCESS WEALTH

__NPV core function__: Accessibility of land records indicating equitable interest (not replacing Govt registered titles/interest)

__Problem__: Conflict due to lag between daily and officially (govt) recorded land transactions

__Current Solution__: Govt registered titles, govt land registry for certified true copies (CTC)

Unpaid experience
Paid experience

Features

- Submission Form
- Dashboard
- Sync profile to social media
- Thumbnail, with image of GIS
- Cart to add records to be paid for viewing
- Electronic signature
- NIN verification
- Email verification
- Automated watermarking
- Update form
- Interactive maps
- Search filters

__Customer__
Goal: submit documents for land transaction

Go to the website/app

Start filling out the form to submit documents, including agent affidavit as needed

- Upload documents in the form and click submit

Before submission, prompt to create profile with submitted information

Display confirmation message for creation of profile and submission of documents, send message about 24hr review period

Give option to sync profile to social media, or/and afterwards display account dashboard

Send message to submitter and owner upon doc review completion

__Customer__
Goal: search documents for a land

Go to the website/app
Click on registry search and see instructions on how to search (survey number or NPV certificate; others will be ALPHA/BETA)

Inform on whether search resulted in a record or not
Display search result grayed out, prompt to create profile

After login and search, display the thumbnail of the record plus:

- Date of land record registration on NPV
- Type of docs available in the record (a list)
- Survey # and NPV certificate #
- # of connected transactions
- # of overlapping interests

Prompt customer to pay to view records, provide options to view bulk records, connected transactions (cart-like feature)

After payment for a record, display:

- Date of land record registration on NPV
- Name of party with equitable interest recorded on NPV
- Documents available in the record (a hyperlinked list)
    - The documents will be watermarked for security
- Survey # and NPV certificate #
- GIS/Mapping of the land
    - Key/legend to read the map
    - The land coordinates and shape on earth
    - Overlapping interests/shapes that intersect the land
    - Connected transactions on the same/parent/child track
- # of connected transactions before and after this record (hyperlinked list that can highlight corresponding map outline as well)
- # of overlapping interests (hyperlinked list that links to the map too)
- Options to pay for additional records from the hyperlink

ALPHA/BETA

__Customer__
Goal: update documents for a land

Go to the website/app

Do a registry search, click on update record

Prompt to create profile in order to update record
From profile dashboard, click on update record from the hyperlinked list of submitted land records
OR From profile dashboard, click on actions-> update a record

- Do a registry search for the record
- Initiate the update record form

The update form starts with NIN verification to confirm if profile matches ownership category info of the land record before giving access to update (i.e. submit documents)

- If no, person has to sign agent affidavit to proceed

From paid registry search result, click on update record

Prompt to create profile in order to update record

- Follow steps outlined in unpaid experience from the profile dashboard

ALPHA/BETA

__Customer__
Goal: access registered data portal

Go to the website/app

Go to Data portal

Prompt to login or create profile

- NIN verification is done while creating profile
- If individual is found in registered database, profile is created- starting with valuers

Click on property value search and see instructions

Show map with only number of data points represented

Any click on map prompts to subscribe (3 day trial?, 3 months, 6 months, 1 yr)

After subscription, search by geographic location and full map is accessible

Each data point shows:

- Type of transaction: Land or house
- Type of property
- Zoning of property
- Transaction amount
- Most recent transaction date
- Type of title

There are options to filter based on data point characteristics (type, zone, title, cost range, date)

Auto-generate watermark report print out of filter data
